Vibration Transmissibility

Vibration Transmissibility is an app that measures in real-time the percentage of vibrational energy that is being transmitted through a structure. It also plots the transmissibility curve of the system and indicates the operational point.

This application requires the use of the VibePro Signal Adapter (DAQ box) and two accelerometers.

Features:
- CPM or Hz Option
- Velocity or Acceleration Option
- Thin or Thick Spectrum Line Option
- Custom Logos for Reports
- Easy Step by Step Instructions
- Easy Report Sharing via Email
- Touch Markers for Custom Measurements
- Informative Diagrams for Setup Instruction

Available for $199.99
